

Modular and Connected Organic Waste digester

Directly on the waste production site

Auchan China Supermarket in Haimen

Is there a big problem to solve?

30-50% of municipal waste are organic

Incineration

- Air pollution
- Hashes

Organics
1 ton
Hashes
100 kg

Organics do not burn very well

High overhaul cost800 CNY/ton (120 us\$)

Why modular?

	Organic waste Recycling	
	Centralized	Modular
Waste Transport	Yes	No
Sorting	Mechanical Sorting	On the fly
Use of energy	Injection on the grid	Local use
Land usage	Creation of a "waste" zone	Minimal land footprint

Traditional centralized processing Refrains the development of recycling!

Why Connected?

Modular, Distributed processing

Impossible to have expert knowledge on each site

Environment technology

- Unpredictable inputs
- Harsh conditions

Need to

- Monitor the real status of the equipment
- Adapt control strategy
- Provide pertinent maintenance actions
- Gather and consolidate operational knowledge

Enwise your waste

Internet of thing technology

Real time monitoring and adaptive control

Modular, distributed waste processing

More efficient recycling strategy

Better usage of our waste!
